## Client - Eagle Brook Church Spring Lake Park Campus

Spring Lake Park, Minnesota

### Challenge.

Eagle Brook, a growing church, recently opened its third campus in a renovated sanctuary located in Spring Lake Park, Minnesota. Weekend services feature live worship from an in-house band and dynamic sermons delivered by the pastor via video with a state-of-the-art video system using three screens. Church staff decided it was necessary to install a new lighting sound and video system in the existing sanctuary that reflected the high standards of a contemporary church. The greatest challenge—the system needed to be installed in just three weeks!

Completion

Buildout

### Meet and Listen.

Audio Logic Systems – the recognized connoisseur of audio, video and lighting designs – listened intently to input provided by the church staff concerning the atmosphere they desired for their many parishioners. Audio Logic Systems also employed EASE modeling to identify the demanding acoustical challenges of the space. ALS concluded that a combination of acoustic panels and “clouds” would meet both the acoustical and aesthetic requirements of the church.

### Design.

Audio Logic Systems successfully met the challenge. The design was approved and installed in just three weeks. Audio Logic Systems designed a d&b audiotechnik Q1 Line Array to meet performance demands. Two arrays of five d&b Q1 speakers and one Q10 down fill comprise the stereo system with a Q-Sub cardioid Subwoofer center cluster. One B2 Subwoofer was positioned beneath the stage operating in Infra Sub Mode.

### Training and Support.

Upon installation, Audio Logic Systems provided comprehensive training as needed for Eagle Brook staff and volunteers and continues to provide ongoing support. ALS is providing continuous support as the ministry team becomes more familiar with the system.

### Results.

Eagle Brook Church is delighted with the sound quality and video imagery the ALS system brings to their services.
